

COMPANY PROFILE

Dryway provides revolutionary, seamless permeable paving across Gauteng. We eliminate water pooling and corrosion by transforming surfaces into advanced drainage systems, protecting foundations and slabs. This aesthetically superior, durable solution increases property value and ends costly water damage.

PROPOSAL

Q1 - 2 2026

Engineered for Beauty. Designed to Protect.

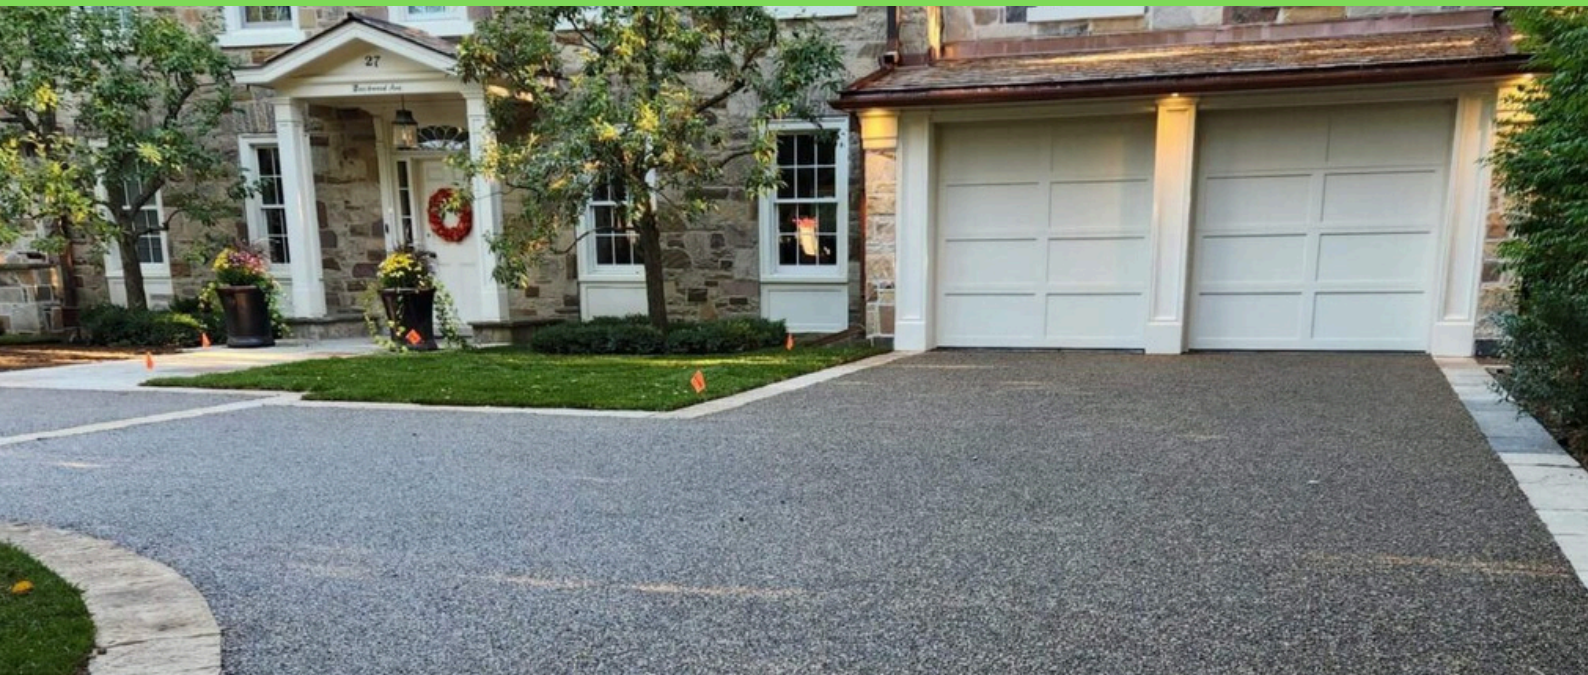

ENGINEERED FOR BEAUTY. DESIGNED TO PROTECT.

INTRODUCING THE SEAMLESS, WATER-FREE SURFACE

The majority of property owners face constant issues with standard impervious paving: water pooling, foundation corrosion, and unattractive surface joints. We eliminate these problems with our revolutionary, fully permeable concrete surface.

IMAGINE A SURFACE THAT:

- Looks incredible: A highly aesthetic, completely seamless finish.
- Protects your assets: Directs 100% of rainfall back into the soil, keeping your foundations and slabs dry.
- Lasts longer: Minimal water means minimal erosion and maintenance.

MARKET SEGMENT

RESIDENTIAL OWNERS

Driveways, Patios, Pool Surrounds, House Skirtings

COMMERCIAL PROPERTY

Office Park Parking Bays, Walkways, Loading Areas

HOSPITALS & INSTITUTIONS

Ambulance Bays, Emergency Access Routes, Sidewalks

LANDLORDS & DEVELOPERS

Townhouse Complex Parking, Access Roads, Courtyards

THE CRITICAL PROBLEM

The Challenge: Water is the Enemy of Infrastructure

Traditional paving, such as asphalt or conventional concrete slabs, creates an impervious barrier.

This leads to several costly and persistent issues for property owners:

Foundation & Wall Corrosion: Water that runs off the paving gets trapped around house skirtings and foundations. This constant saturation is the main reason for corrosion, causing rising damp, structural cracks, and expensive long-term damage.

Drainage Overload & Flooding: Rainwater overwhelms stormwater systems, leading to localized flooding and high municipal water bills.

Unsightly Water Pooling: Puddles create hazards, stains, and inconvenience in parking lots and walkways.

Aesthetic Disruption: Joints, gaps, and edges in traditional pavers detract from the overall look of a high-end property.

THE DRYWAY SOLUTION

Permeable Paving—The Ultimate Shield
Our proprietary permeable surface acts as a complete drainage system, integrated directly into your paving.

Key Advantage: It does not hold water. Every drop of water passes directly through the surface, eliminating runoff and pooling on the surface.

Engineered for Beauty. Designed to Protect.

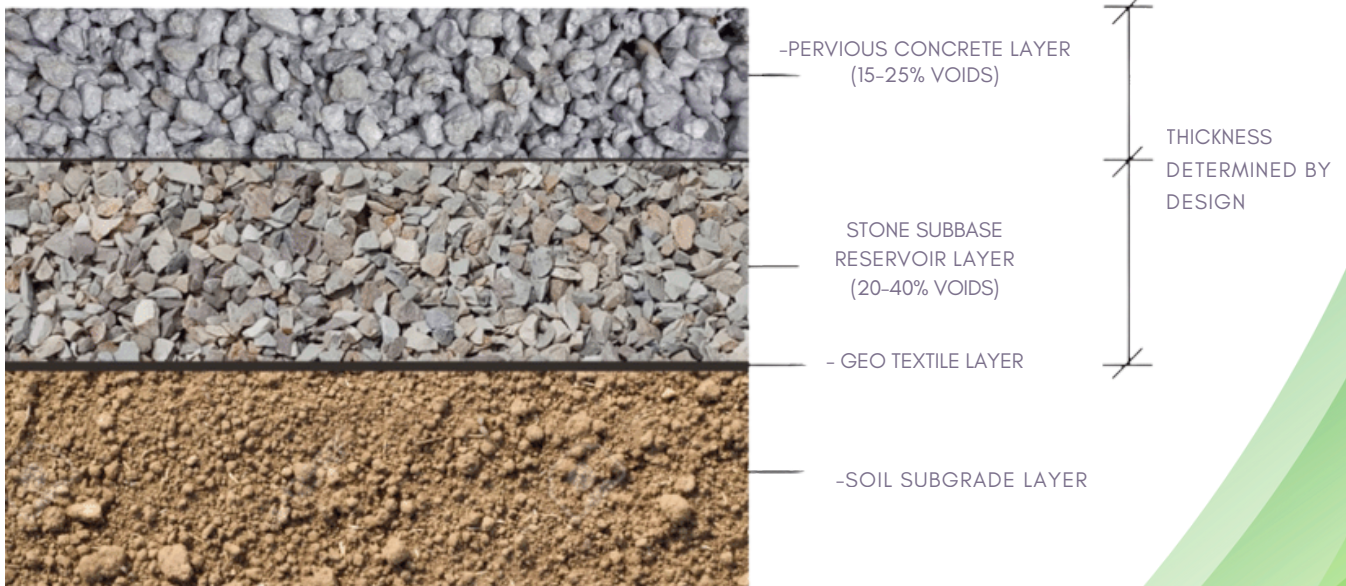

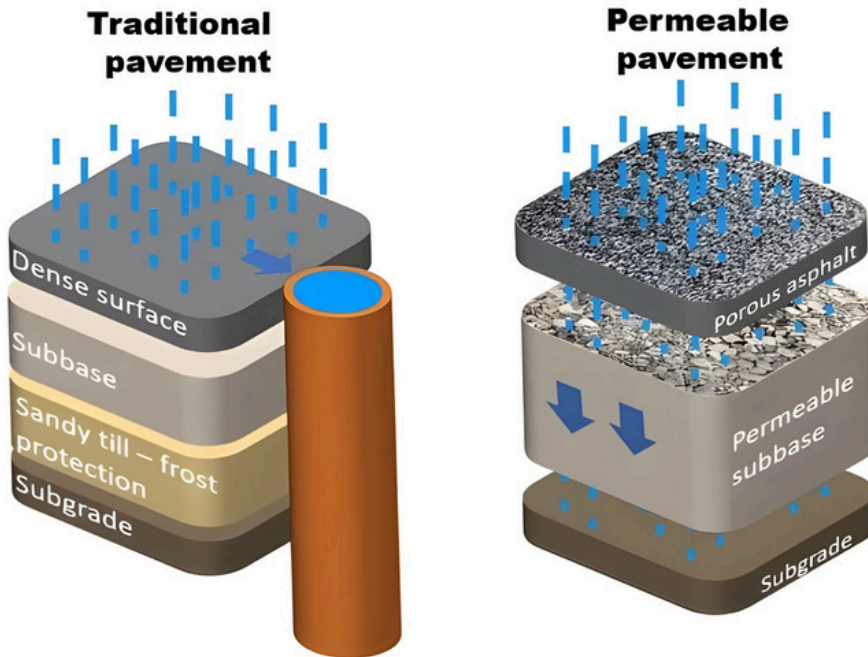

WHERE OUR SURFACE **EXCELS**

Our solution is not just for driveways; its seamless finish and superior water management make it the perfect material for high-visibility and problem-prone areas across various properties.

FEATURE	BENEFIT TO PROPERTY OWNERS
Seamless Aesthetic Finish	Creates a sophisticated, high-end look without distracting joints or grout lines, enhancing curb appeal and property value.
100% Permeability	Main Pro: Water is immediately filtered and returned to the water table, protecting house skirts, slabs, and foundations from corrosion and damp damage.
Exceptional Durability	Engineered to withstand heavy traffic and South African conditions, offering a lifespan superior to standard paving.
Reduced Maintenance	Eliminates the need to sweep out sand from brick joints or constantly repair eroded edges caused by water runoff.

VERSATILITY & TECHNICAL EXCELLENCE

Technical demonstration:

APPLICATION AREA	WHY OUR PERMEABLE PAVING IS THE BEST CHOICE
Parking Areas (Office Parks / Complexes)	Eliminates pooling puddles, provides a durable, non-slip surface, and allows for green infrastructure compliance.
Walkways & Pathways	Offers a safe, immediate-drying path for pedestrian traffic. The seamless finish provides a clean, modern look.
House Skirtings / Aprons	Crucial Corrosion Prevention. Creates a protective, water-free zone around the perimeter of a structure, preventing hydrostatic pressure and damp ingress into walls.
Pool Surrounds	Safe, non-slip, and quick-drying, it immediately drains splashed water away from the pool edge, making the area safer and reducing algae growth on the surface.
Patios and Entertainment Areas	Provides a beautiful, continuous floor-like finish that is always ready for use, even immediately after heavy rain.

OUR COMMITMENT TO QUALITY AND SUSTAINABILITY

At Dryway, we are committed to delivering the highest standards of installation and service. Our process ensures that every installation is built to last and provides maximum protection for your investment.

Site Assessment: Detailed evaluation of existing drainage and base stability.

Expert Base Prep: Laying of permeable aggregates to ensure rapid vertical drainage.

Specialized Installation: Application of our high-strength, polymer-modified pervious concrete mix.

Final Sealing & Curing: Ensuring optimal strength and longevity.

The Long-Term Value of Permeability

Choosing our system is not just a paving decision—it's a long-term strategy to protect your property:

Superior Aesthetics + Foundation Protection + Reduced Water Runoff = Increased Property Value

Ready to transform your property with a beautiful, durable, and water-free surface? Contact us today for a complimentary site assessment and no-obligation quotation.
